Can i use DS / DNSSEC ?

Can i use DS / DNSSEC ?

In principle, this is possible if the domain was registered through us, is located with us and supports the entry in question.

To do this, you must create a ticket in the Central Customer Management (ZKM) at the point "Support" and send us the following information:

Domain

DS Entry

Flags (256 or 257)

Public key (base64)

Algorithm

Keytag

Digest Type

Digest

As soon as the entry has been set, you will receive feedback from us.
