

General Service Questions

Acronis Cyber Protect - Create a protection plan

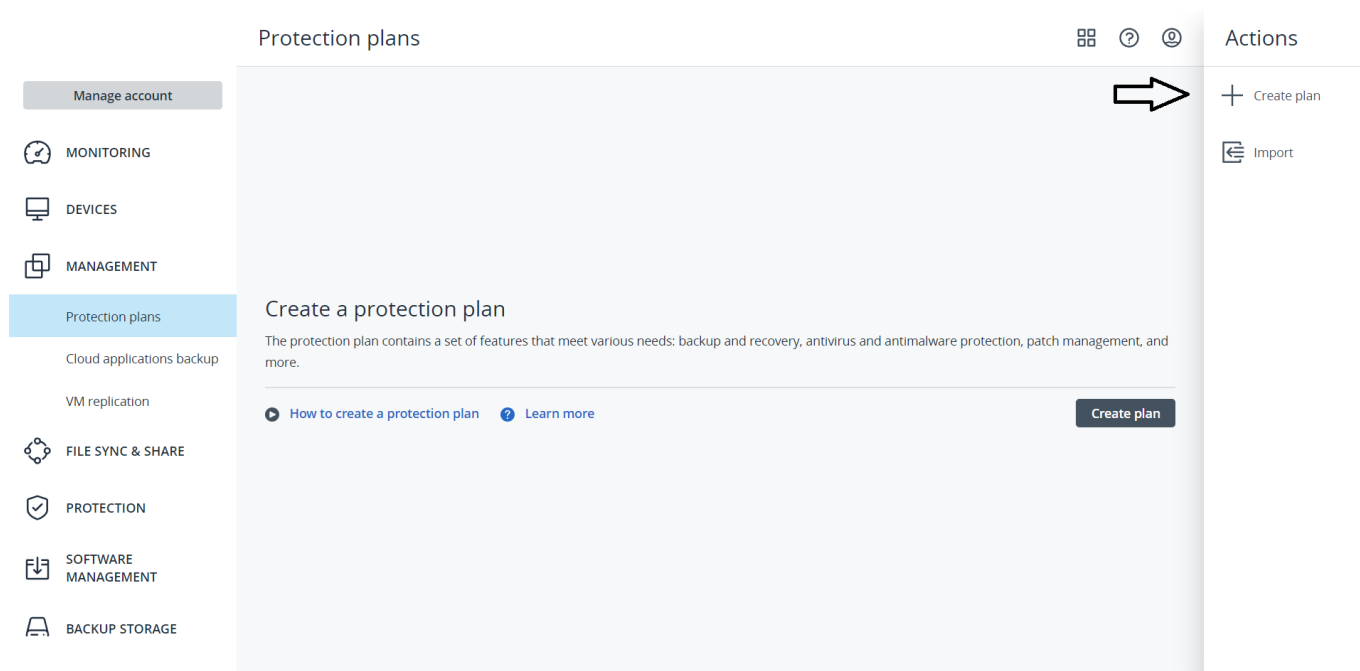

1. Open administration menu

To create a protection plan, please go to the Acronis Cyber Protect management console. Under the 'Management' tab, you will find the subcategory 'Protection plans'. Click 'Protection plans' to start editing.

2. create a plan

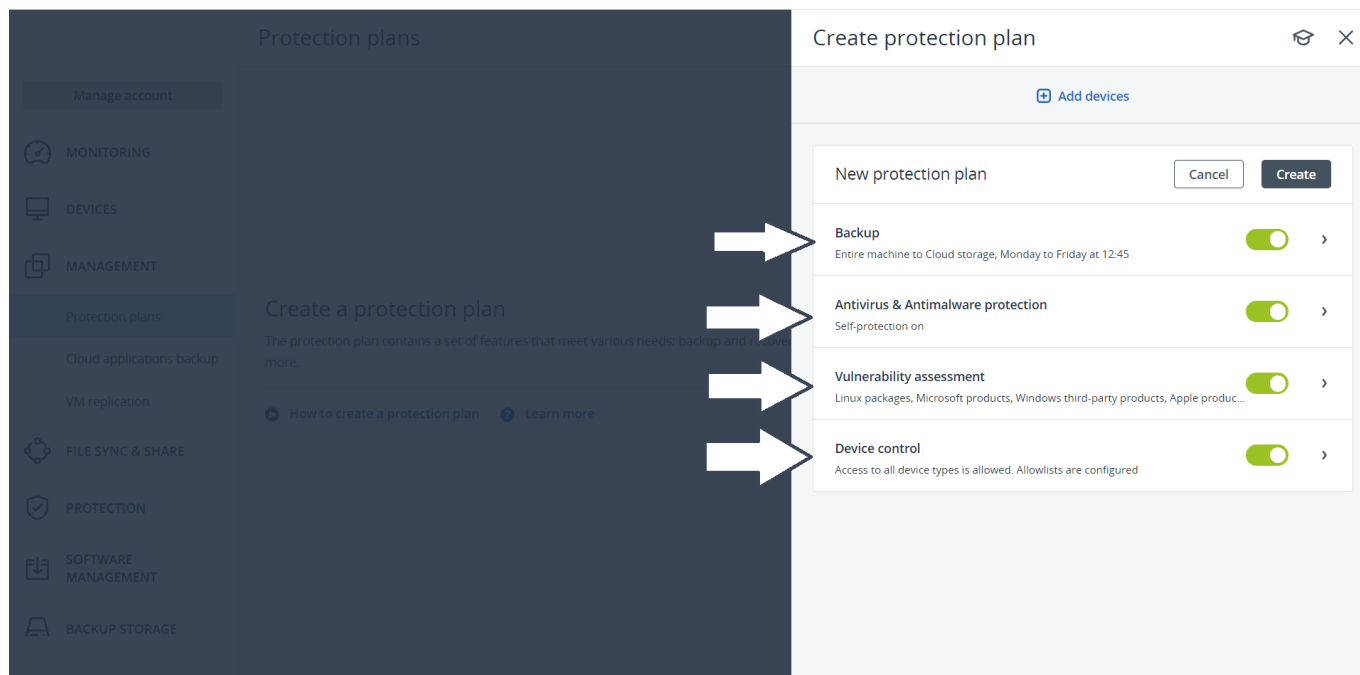

Please continue with the creation of the plan. On the right-hand side, another tab appears under the name "Actions". There you will find the option "Create plan".

3. adapt protection plan

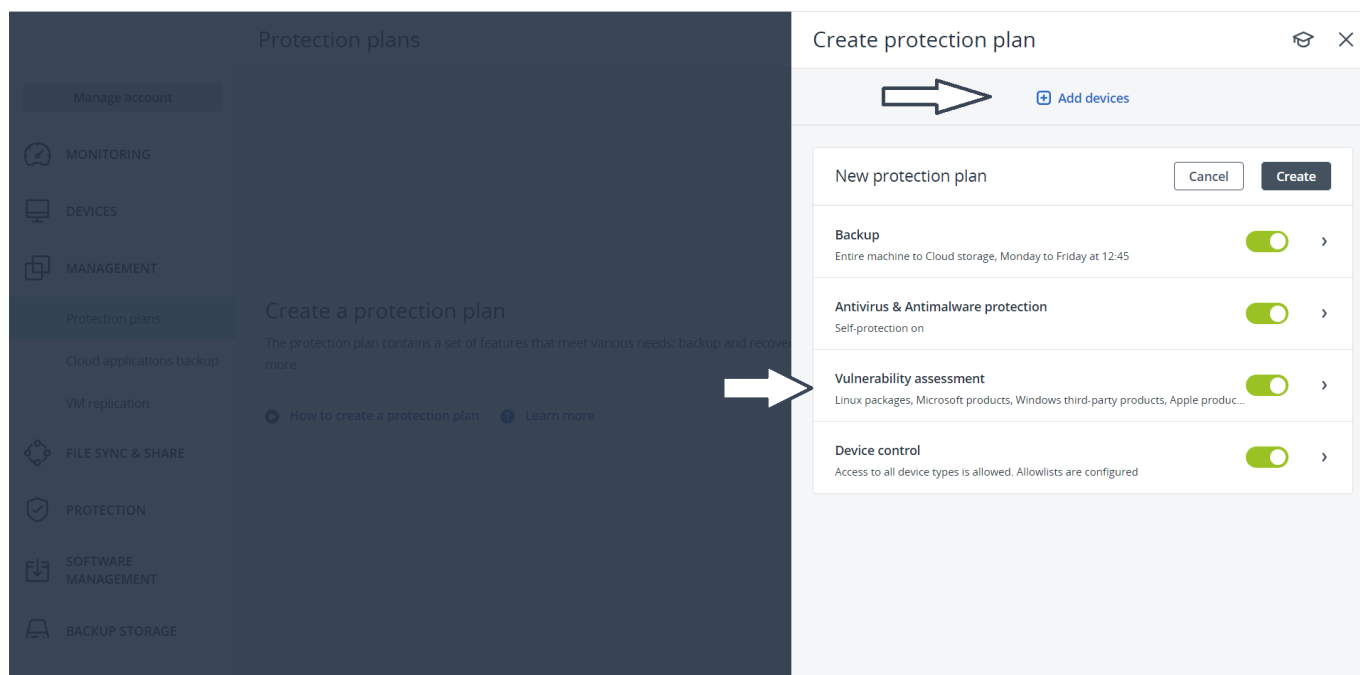

General Service Questions

After you have initiated the creation of the protection plan, you can now customise how the protection plan should look. There are several options to choose from, including: Backup, Antivirus & Antimalware Protection, Vulnerability Assessment and Device Control. Now you can select modularly which features you would like to have configured on the device(s).

4. select options

After the features have been selected, the device(s) can now be added.

5. protection plan successfully created

Now the protection plan should appear in the administration and the configuration is complete.

General Service Questions

The screenshot shows the Microsoft 365 Protection plans interface. On the left, a navigation sidebar includes sections like 'MONITORING', 'DEVICES', 'MANAGEMENT', 'PROTECTION', and 'BACKUP STORAGE'. The main area is titled 'Protection plans' and contains a table with columns for 'Name' and 'Devices'. A 'New protection plan' button is visible. On the right, a 'Details' pane shows configuration options for a new plan, such as 'Backup' (entire machine to cloud storage), 'Schedule' (Monday to Friday at 12:45), 'How long to keep' (6 months), 'Encryption' (disabled), and 'Antivirus & Antimalware protection' (self-protection on).
