## General Service Questions

## How can I import a protection plan to another device?

1. create and export a .json file

The export function in the Acronis Cyber Protect management tool allows you to export a .json file of your protection plan. This allows you to transfer your pre-configured protection plans to other devices. After pressing the export button, a download is initiated.

Twebtropia.com	Protection plans				# ? @	Actions
Manage account	Search by name			Q	Selected: 1 / Loaded: 1 / Total: 1	+ Create plan
	□ Name ↓	Devices 4	Status $\downarrow$	Account 4	Created at 🕠 🗘	Import
	New protection plan	ı 1				Details
						Stop
Protection plans						🗹 Edit
Cloud applications backup						L Activities
VM replication						(!) Alerts
FILE SYNC & SHARE						Clone
						Export
						Disable
V						
New protection pljson 🔨						Alle anzeigen X

## 2. importing a .json file

To be able to import the .json file, go to the "Management" tab. In the drop-down menu, select the item "Protection plans". Here you will find an option for "import" in the menu on the right. After you have pressed "import", the file explorer appears. Select the previously exported (see step 1) or any .json file. The protection plan then appears in the directory and can be assigned to a device.
