General Service Questions

Can I configure my order individually?

Depending on which of our hosting solutions you would like to order, you have a certain amount of leeway when it comes to configuration options. You can configure our Cloud VPS individually up to a certain degree, depending on your preferences. For example, the CPU, RAM and storage are freely scalable. for additional charge, you can also configure your backup space or additional IPs (including IP subnets) individually.

You have the possibility of an individual configuration for Dedicated, Managed and Root Servers during the order process. This includes e.g. RAM, storage or a 2nd CPU. However, a completely individual configuration is unfortunately not possible.

Unique solution ID: #1388
