Network

What is the network configuration of my Virtual Machine ?

When a virtual machine is created on the host system, the network configuration of the VM is always as follows:

IP: <Additionally ordered IP address>
Netmask: 255.255.255.255
Gateway: <Same gateway as the host system such as: 192.168.0.1>

An additional IP can be ordered from ZKM. See more information here.
