## RDNS for customer owned address space

For customer address space announced via our AS24961 it is possible to have RDNS functionality within the customer panel. We will automatically create RDNS zones on our dns servers ns1.ntdns.de, ns2.ntdns.de and ns3.ntdns.de for your address space after announcement has been completed.

If you announce address space via BGP we do not support hosting of the RDNS zones. Please set up own DNS servers or use 3rd party services.
