## **Domains & SSL**

## Can i use DS / DNSSEC ?

## Can i use DS / DNSSEC?

In principle, this is possible if the domain was registered through us, is located with us and supports the entry in question.

To do this, you must create a ticket in the Central Customer Management (ZKM) at the point "Support" and send us the following information:

DS Entry
Flags (256 or 257)
Public key (base64)
Algorithm
Keytag
Digest Type
Digest
As soon as the entry has been set, you will receive feedback from us.

Unique solution ID: #1562

Author: n/a

Domain
