Windows

How can I install the License Agent?

You have two options to install the License Agent on your server:

- Independent integration of the License Agent
- Integration of the license agent by the myLoc technical team

To complete the agent setup independently, proceed as follows:
- Download file: http://static.myloc.de/licenseAgent/latest/MS_LA_setup.msi
- Execute the file as administrator
- Restart the server if necessary

If you would like our technical team to integrate the agent, please open a ticket with the following information:
- Server on which the installation should be executed
- an admin user with password for us, for the installation
- a time frame, when the installation can be performed
