

# cPanel

## How do I do the initial configuration with cPanel ?

If the installation of cPanel is finished, you first have to log into the WHM under <Your-IP>:2087 with the user name "root" and your password retrieved in the ZKM.

There you can enter your e-mail address and our name servers if you do not want to use your own.

**Email Address**  
Your server will send status and error notifications to this address.  
 Privacy Policy [↗](#)

**Nameservers**  
Your server requires nameservers before you can create cPanel or reseller accounts. Nameservers convert domain names into server IP addresses so that visitors can access your websites.

[Reset](#)

[Reset](#)

[Learn More \[↗\]\(#\)](#)

X [Skip](#) → [Finish](#)

If there is no more test version available for this IP, unfortunately we can not reset this and a license must be ordered over the ZKM.

 **Zertifikatfehler** <https://f002.fuchsia.fastwebserver.de:2087/cpsess3341756732>

## Cannot Read License File

To access the interface, you must install the license and ensure that the license is active.

The cPanel license server said that a license could not be issued for your server (66). For more information visit: <http://www.cpanel.net/lic.html> The exact message was: Already Used cPanel/WHM Trial License for this IP. (217.79.181.2)

If you do not currently own a license, register at the [cPanel Store](#) and [request a trial license](#).

You can purchase or lease a license directly from [cPanel](#), or from one of our [Partners](#).

After you successfully activate the license, [try login again in a few minutes](#) the page and the message will no longer display.

[Privacy Policy](#)

A license for the corresponding server can be ordered in the ZKM under "License Management":

1. **Meine Produkte**

2. **Lizenz-Management**

3. **Lizenz bestellen**

As soon as a user has been successfully created, you can login under "https://<Your IP>:2083/".

## Create a New Account

Account Creation Status: ok (Account Creation Ok)

The initial configuration is now complete, so that you can setup your domains/webspace etc. now:

The screenshot shows the cPanel interface. At the top, there is a browser header with a warning about a certificate error for the URL. The main header says "cPanel". Below the header is a search bar and a "LOGOUT" link. On the left, there is a sidebar with icons for different sections: Grid View, User Accounts, and FILES. The FILES section is currently selected and expanded, showing the following tools:

- File Manager
- Images
- Directory Privacy
- Disk Usage
- Web Disk
- FTP Accounts
- FTP Connections
- Backup
- Backup Wizard
- Git™ Version Control

Unique solution ID: #1494
