vServer / Virtual Dedicated Server

How do i change the Hostname?

Sometimes it is necessary to change the hostname in the server settings. To change the hostname for a VPS (no dedicated server) we have a comfort function in the customer panel.

Table of Contents

- 1. Explaination
- 2. Procedere

---

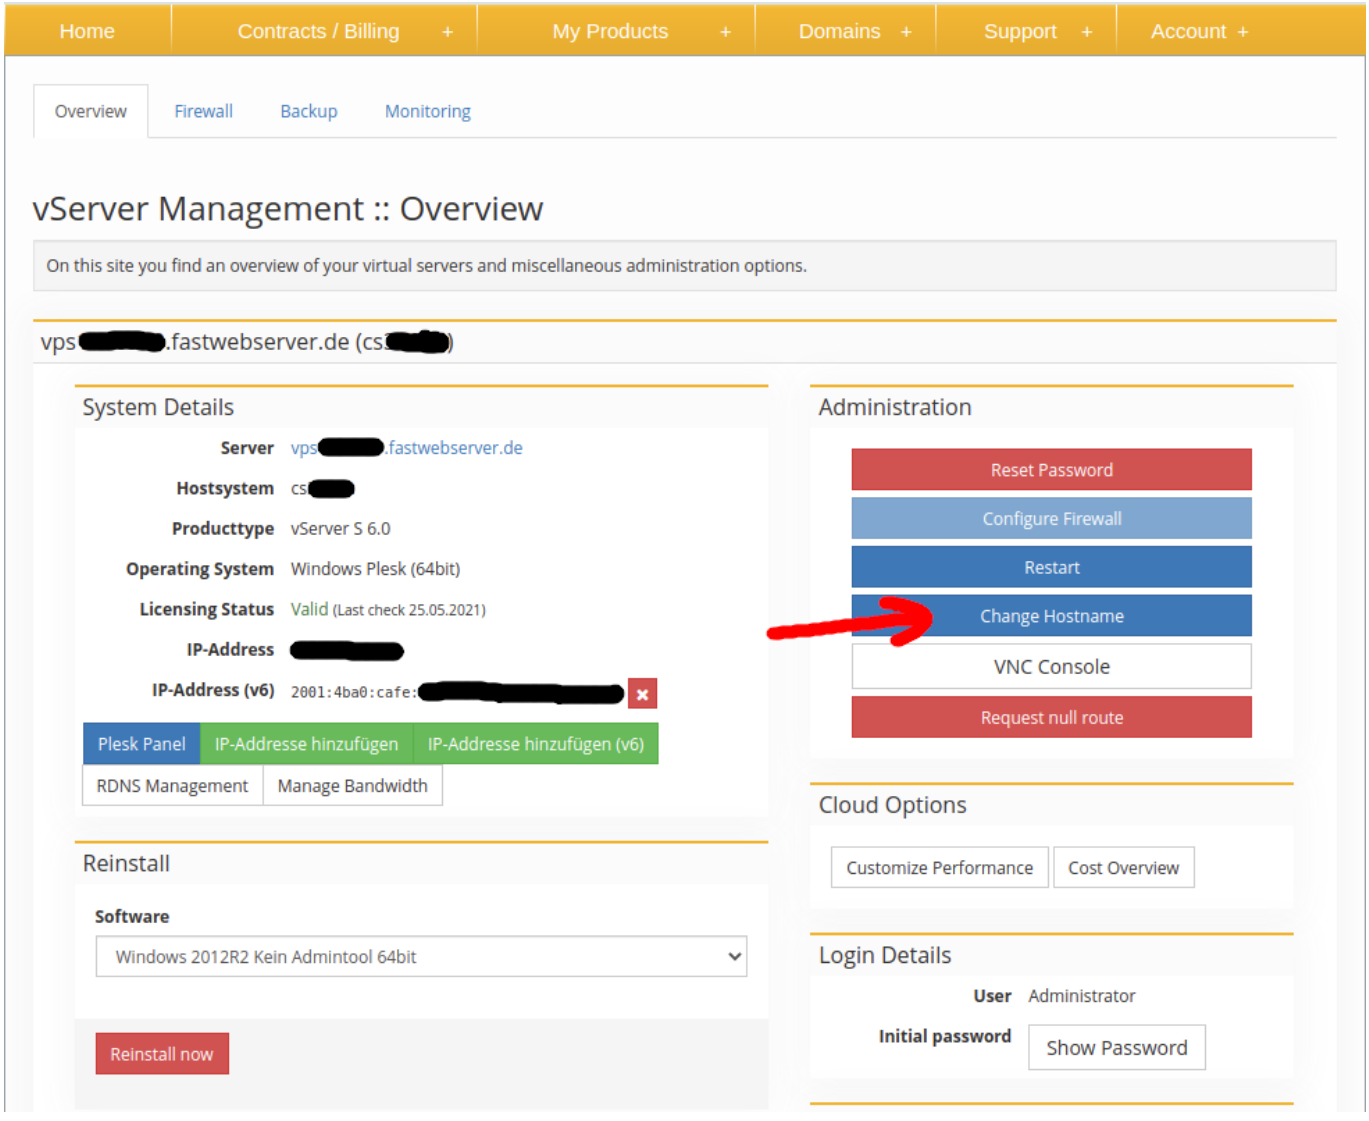

1. Explaination

To set the hostname, which is controlled by the hostsystem in a VPS, you need to make a change in the customer panel. A simple change in windows or linux (/etc/hostname) does not work because changes are reverted after a restart.

---

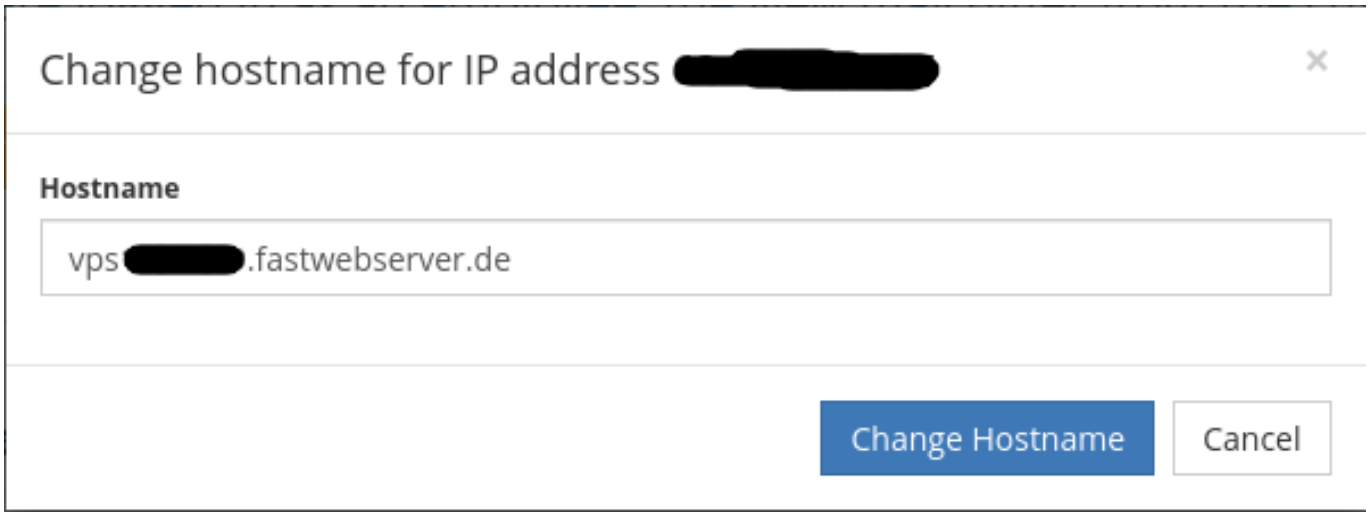

2. Procedere

Click on "Change Hostname" in the customer panel under the vps management.

After that a dialog window opens. Here the correct hostname can be set.
