

# Admintools

## How do I get the software license for my administration tool?

The licenses are managed by us centrally via the point "Licenses" within the central customer management (ZKM)

Depending on the administration tool installed on your server, a suitable license key will be displayed here.

If the server has been reassigned or the administration tool has been changed, it may have to be created beforehand via the button "Generate Key".

Unique solution ID: #1471
