# cPanel

How do I do the initial configuration with cPanel ?

If the installation of cPanel is finished, you first have to log into the WHM under <Your-IP>:2087 with the user name "root" and your password retrieved in the ZKM.

There you can enter your e-mail address and our name servers if you do not want to use your own.

cPanel

If there is no more test version available for this IP, unfortunately we can not reset this and a license must be ordered over the ZKM.

⚠ Zertifikatfehler https://f002.fuchsia.fastwebserver.de:2087/cpsess3341756732

Cannot Read License File

To access the interface, you must install the license and ensure that the license is active.

The cPanel license server said that a license could not be issued for your server (66). For more information visit: http://www.cpanel.net/lic.html The exact message was: Already Used cPanel/WHM Trial License for this IP. (217.79.181.2)

To ensure that the server is licensed, navigate to http://verify.cpanel.net/, and enter the server's public IP address.

If the server is licensed, run the /usr/local/cpanel/cpkeyclt command as the root user.

Make certain that port 80 is open to contact our license server and that your server's hostname is a FQDN.

If you do not currently own a license, register at the cPanel Store and request a trial license.

You can purchase or lease a license directly from cPanel, or from one of our Partners.

After you successfully activate the license, try login again in a few minutes the page and the message will no longer display.

Privacy Policy

A license for the corresponding server can be ordered in the ZKM under "License Management":

cPanel

As soon as a user has been successfully created, you can login under "https://<Your IP>:2083/".

Account Creation Status: ok (Account Creation Ok)

The initial configuration is now complete, so that you can setup your domains/webspace etc. now:
